SUMMARY

Flutter mobile developer (since 2021) specializing in Clean Architecture, MVVM and Riverpod — building production-ready, testable and scalable applications. Experienced in full-stack mobile development with Supabase (PostgreSQL + Edge Functions), AI/RAG system integration, in-app subscription monetization via RevenueCat, and multi-language localization across 7 languages. Published 4 apps on Google Play & App Store with 6,500+ total downloads. Focused on performance optimization, CI/CD automation and delivering quality user experiences.

CORE COMPETENCIES

Mobile Framework	Flutter, Dart 3
Architecture & Patterns	Clean Architecture, MVVM, Bloc, Provider, Cubit, GetX
State Management	Riverpod, Bloc, Cubit, Provider, GetX (production experience with all)
Backend & Integration	NestJS, Supabase (PostgreSQL + Edge Functions), Firebase (Firestore, Auth, Cloud Functions), REST APIs
AI & RAG	RAG pipeline development, AI API integration, prompt engineering, vector DB, semantic search
Data & Storage	PostgreSQL, SQLite, SQL, Supabase, Hive, Redis, Shared Preferences
Authentication	JWT, Firebase Auth, Supabase Auth, protected routes
Cloud & Infrastructure	Docker, cloud deployment, CI/CD pipelines
Testing	Unit, Widget, Integration (90%+ coverage on critical modules)
CI/CD & DevOps	Codemagic (automated build / test / deploy), Git & GitHub Flow
Publishing	Google Play Console, App Store Connect
Monetization	RevenueCat (in-app subscriptions), Google Mobile Ads (rewarded), freemium model design
Navigation	GoRouter
Models & Codegen	Freezed, json_serializable, build_runner
Localization	ARB-based, 7 languages (EN, TR, DE, ES, IT, PT, FR)
Marketing & Analytics	Google Ads, Meta Ads, ASO, Firebase Analytics, Crashlytics
UI/UX	Material Design, Responsive layouts, performance tuning, custom components
Tooling	Git, Postman, Figma, Firebase Console, Codemagic

PROJECTS

Broccolai – AI Football Prediction App — *Personal Project*

- AI-powered match predictions with confidence scores, value bet detection and coupon builder across top leagues.

- Freemium model: free tier with rewarded ads + premium subscription via RevenueCat (App Store & Google Play).
- 7-language localization (EN, TR, DE, ES, IT, PT, FR), Supabase Edge Functions for AI pipeline, Codemagic CI/CD.
- Store links: play.google.com/store/apps/developer?id=kamuranDev | apps.apple.com/developer/kamuran-dogan/id1841696323

Tech: Flutter, Riverpod, GoRouter, Supabase (PostgreSQL + Edge Functions), RevenueCat, Firebase Analytics + Crashlytics, Hive, Freezed, Google Mobile Ads

AI RAG Backend – Semantic Search & Prediction API — Personal Project

- Production-grade NestJS backend with RAG pipeline: embedding generation, vector DB integration and semantic search.
- AI agent implementation with multi-step reasoning and tool calling. JWT auth, rate limiting, Redis cache.
- Dockerized, cloud-deployed with CI/CD pipeline. Integrated with Flutter frontend.

Tech: NestJS, PostgreSQL, TypeScript, Docker, Redis, JWT, AI API, Vector DB, Cloud Deployment

Çeyiz Listesi – Wedding Preparation Checklist App — 5,000+ downloads (Google Play)

- Implemented list domain, persistence layer and minimal UX for rapid input.

Tech: Flutter, SQLite, Custom UI Components, State Management (Bloc/Cubit)

Debt & Installment Tracker – Personal Finance App — 1,000+ downloads (Google Play)

- Built tracking logic, scheduled notifications & visual reporting components.

Tech: Flutter, Local Notifications, Charts, Data Visualization

Bedtime Tales – Children's Story Application — 500+ downloads (Google Play)

- Developed story delivery & content flow; improved offline usability.

Tech: Flutter, Firebase, Custom Audio Player, Offline Reading

ACHIEVEMENTS

- **Total Downloads: 6,500+ (aggregate of live listings)**
- RAG System: End-to-end AI pipeline from embedding to semantic search in production
- Broccolai: Full-stack AI app — Supabase Edge Functions to App Store & Google Play with RevenueCat monetization
- Test Quality: 90%+ coverage on core logic modules
- Architecture: Modular, maintainable structure via Clean Architecture across all projects
- Automation: Reduced manual release effort with Codemagic CI/CD pipelines

TECHNICAL EXPERIENCE DETAILS

Clean Architecture: Data / Domain / Presentation separation to minimize coupling & improve testability

RAG & AI Backend: Embedding generation, vector DB setup, semantic search pipeline, AI agent with tool calling and multi-step reasoning

NestJS Backend: Controller / Service / Module structure, JWT auth, protected routes, rate limiting, error handling

Cloud & Docker: Containerized deployments, cloud infrastructure, automated CI/CD pipelines

Supabase & SQL: PostgreSQL database, Edge Functions (Deno/TypeScript), real-time data and auth integration

Monetization: RevenueCat subscription management, rewarded ad integration, freemium funnel design

Localization: ARB-based multi-language support with flutter gen-l10n, auto device-locale detection

CI/CD: Automated build / test / distribution pipelines on Codemagic (v* tag triggers, Play Store & App Store)

ASO & Analytics: Keyword optimization, Firebase Analytics, Crashlytics, user behavior insights

EDUCATION

Anadolu University (2015–2019)

Bachelor's – Labor Economics & Industrial Relations

LANGUAGES

Turkish: Native

English: B1 – Can read & write technical documentation

PERSONAL ATTRIBUTES

- Team Collaboration: Transparent communicator, cooperative and proactive
- Problem Solving: Analytical approach to complex scenarios
- Continuous Learning: Tracks ecosystem trends and adapts rapidly
- Code Quality: Refactoring, readability and best-practice focus
